

Farm Energy Audits

NRCS has just updated their farm energy audit program to make it easier for farmers. The primary change is the combination of the headquarters (122) and landscape (124) audits into a single farm energy audit (128).

Now one audit can help you get EQIP payments for:

Lighting

Grain Dryers

Irrigation

Ventilation

and more

→ Ask your local NRCS office about AgEMP (CAP-128) to get started.

Be sure to complete the single-page, no-commitment application before the October deadline.

What is an AgEMP?

An Agricultural Energy Management Plan (AgEMP) is a farm energy audit provided by NRCS.

- Learn ways to save on utility bills
- Get advice on what equipment should be upgraded
- Gain access to EQIP payments

Application due
October 17th.
